*'kind to you, kind to our planet'*

## RETAIL RANGE

## ABOUT US

Sanify are a leading UK-based manufacturer specialising in natural, eco-friendly disinfectant solutions. Our flagship product is Hypochlorous Acid (HOCl), a highly effective, 100% natural and vegan disinfectant that kills 99.9999% of bacteria and viruses.

We are committed to providing advanced, safe cleaning products while prioritising environmental sustainability.

As one of the UK's leading independent manufacturers in this field, Sanify offers a range of products suitable for both consumer and professional use, aiming to revolutionise the natural antiseptic and disinfectant market.

Utilising cutting-edge technology, we maintain the highest quality standards throughout our manufacturing processes. This commitment ensures that our customers receive the superior, effective, and sustainable sanitisation solutions they seek.

Sanify has been rigorously tested in hospital microbiology departments worldwide, independent UK laboratories and complies with all necessary certification for both human and animal use.

Each stage of production is rigorously monitored for both HOCl and water quality ensuring that the product can perform to the highest expectations in all sectors. Our processes are ISO and UKAS quality assured.

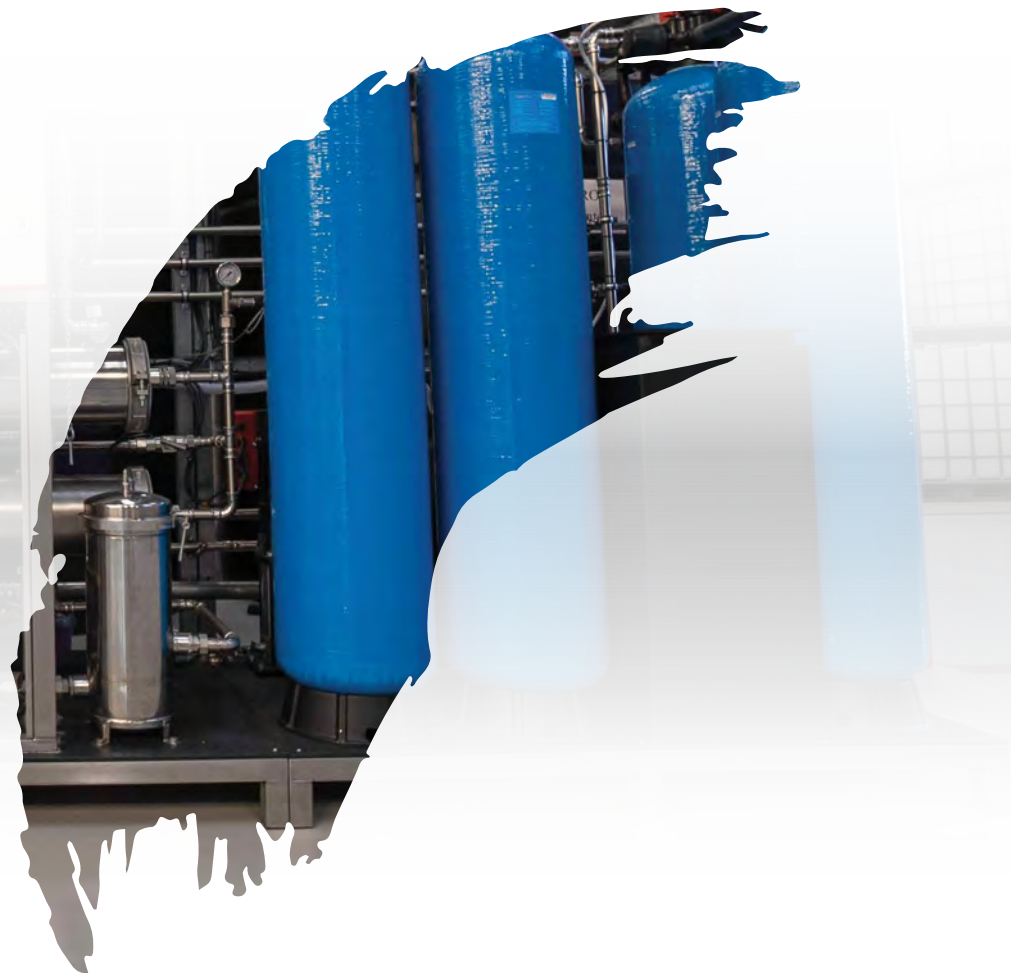

# WHAT IS HOCL?

# SANIFY

HOCl is produced through a patented manufacturing process to ensure purity and stability, mimicking the quality of HOCl produced by the body's white blood cells. Its combination of effectiveness and safety makes it a valuable substance in various health, skincare, and cleaning applications.

Several important properties and applications:

- Powerful antimicrobial agent: It's highly effective against bacteria, viruses, and fungi, making it a potent disinfectant.
- Safe and non-toxic: HOCl is generally safe for human use and environmentally friendly, as it's non-toxic to humans when used properly.
- Skincare applications: It's used in skincare products for its ability to fight acne-causing bacteria, soothe inflammation, and promote wound healing.
- Cleaning and disinfecting: HOCl is used in cleaning products for various surfaces due to its effectiveness in killing germs.
- Fast-acting: It can kill bacteria and viruses in under 15 seconds when used in certain formulations.
- Versatile: HOCl can be used on sensitive skin, for wound care, and even in healthcare settings.
- Biodegradable: It breaks down into harmless components, making it an eco-friendly option.

## Powered by

Hypochlorous Technology

- Hand Rub to help kill bacteria and viruses that cause illness. Our product is 100% natural and hypoallergenic non-irritant, suitable for sensitive skin. Natural, safe, and effective for everyone, including babies and children, this hypochlorous acid-based solution kills 99.9999% of germs on contact. Hypochlorous acid is a mild acid naturally produced in humans and animals, serving as the body's own biocide. Its oxidising action eliminates bacteria and viruses faster than alcohol-based skin disinfectants.
- PH neutral, this solution won't sting, irritate or dry the skin. It's hypoallergenic and skin-friendly, suitable for sensitive skin and delicate areas like the face. It's ideal for disinfecting skin after tattoos and piercings, as an easy hand sanitiser, and more. No rinsing required – it's gentle on skin yet highly effective at eliminating harmful microbes in seconds.
- COSHH Safe certified, not hazardous to health and the environment.

# WHITE LABEL / PRIVATE LABEL

# SANIFY

- At Sanify we offer the above services to our clients, we can custom make any product to suit your requirements to size and packaging.
- Benefits of using white label products include:
  - White label products offer quick market entry and testing.
  - Fast entry into the market without needing to develop your own products.
  - Reduced costs compared to creating a product from scratch.
  - The ability to focus on marketing and sales rather than manufacturing.
- Private label products are created for a retailer by Sanify at our UK manufacturing plant. This differs from in-house manufacturing, where a company produces goods within its own factories, with private label, the retailer controls the product's design, ingredients, and packaging.
- White label products are generic items that you rebrand. Private label products are custom-designed and exclusive to your requirements .
- Private label offers more control and differentiation but requires greater investment than white label.
- We are continually investing in factory and process development, and our UK manufacturing facility has capacity to blend and package high volumes of chemicals for a wide range of industry sectors. Whether your focus is the catering trade, health and care, leisure, or education and public services, you can have confidence in our ability to provide an own-label solution that supports your brand.
